

Email Spam Analysis & Domain Verification Report

Date of Analysis: 8th September 2026

Analyst Name: Snigdha M

1. Executive Summary

This report analyzes an unsolicited bulk email (also known as “*spam*”) received on 8th September 2026. The goal of this analysis is to verify the legitimacy of the sender's domain, evaluate email authentication protocols, and to determine if the email actually poses a security risk or is just standard marketing spam.

2. Email Details

- **Displayed Sender Name:** IITM Pravartak
- **Visible From Address:** iitmpravartak@simplilearnmailer.com
- **Subject Line:** Go Beyond AI Tools. Build Enterprise AI Systems | Applied Generative AI | IITM Pravartak & Simplilearn

3. Technical Header Analysis

- **Originating IP Address:** 175.158.66.170
- **SPF Verification:** PASS
- **DKIM Verification:** PASS
- **DMARC Verification:** PASS

4. Content & Threat Evaluation

- **Classification:** Legitimate Unsolicited Bulk Email (Spam)
- **Analysis:** The email successfully passed all three major authentication protocols (SPF, DKIM, and DMARC). This proves that the email originated from the actual owner of the domain listed in the "From" field. No evidence of domain spoofing or email tampering.
- **Link Safety:** A VirusTotal scan of the embedded links returned a score of 0/90 (Clean). The email is classified as a low-risk marketing message rather than a malicious phishing attempt.

5. Recommended Remediation Actions

1. **Safely Unsubscribe:** Since the domain was verified as legitimate and links were flagged as clean by VirusTotal, the user can safely click the vendor's native "Unsubscribe" link to stop future mailings.
2. **Inbox Filtering & Labeling:** Create a localized mail rule/filter to automatically route emails from this verified sender domain directly to a "Marketing" or "Archive" folder to reduce inbox clutter.
3. **Gateway Reputation Tuning (Optional):** If this particular marketing vendor routinely bypasses corporate filters and is causing productivity loss, the user or IT admin of the organization can submit the sender domain to the email security gateway's "Graymail" blocklist.
4. **User Hygiene Education:** Remind users to always perform a quick visual check of email links before clicking, even if the sender passes authentication, as legitimate marketing platforms can occasionally be compromised.
